

Assignment: Write some Javascript variables

First, write some variables

- A text string called "name" with your full name as value
- A number with called "year_of_birth" with the year you were born (####) as value
- A number called "current_year" with the current year as value
- An array called "interests" with at least 5 items of things you find of interest as value

1. Make a variable called "age" that calculates your age by using the "year_of_birth" and "current_year" variables
2. Write out this variable to the console using the console.log() function

OPTIONAL

3. Create a html element (e.g. h1) and use jQuery to insert the value of the age variable into this html element.
4. Create an element, and using jQuery, loop through the array and foreach item insert a element into the ul with the value of the array item. (Hint: "For" loop)
