

Boilerplate

Create a folder that you can copy and use for basis for all new assignments

- 1) Create a new folder called "Boilerplate"
- 2) In this folder, create a new .php, .css and .js file
- 3) Insert the basic HTML structure in the .php file
- 4) Link the CSS and Javascript files
- 5) Now every time you start a new assignment, you can start by copying this folder.
No more starting from scratch :D

Snippets

```
<link rel="stylesheet" href="style.css">
```

```
<script src="script.js"></script>
```
