

AJAX

Load some content through jQuery AJAX

- 1) Look at the ajax_load.zip
- 2) Type your own name into the form
- 3) See what happens when you type in "Jarne"
- 4) Open generateData.php and change the conditional if statement in php to react to your name
- 5) Add an additional else statement that loads an image of your choice
- 6) (Optional) Add an elseif statement
- 7) (Optional) Change the form method from POST to GET and update the php code correspondingly
- 8) (Optional) Add an additional element to the form ("age") and check to see if the user is above 18

Snippets

```
if($_POST['name']==="Jarne") {  
    // your code here  
} else {  
    // your code here  
}
```
