Sliding Menu

Have a menu off-screen and slide it in when a button is clicked

1) Create new .php, .css and .js files and link them together

2) Create a main menu (e.g. use a structure like nav>ul>li>a) and give the container an id of "main-menu"

3) Format it and position it off-screen to the left, so that only the right border is visible (use negative margin, e.g. margin-left: -400px)

4) Create a button element with an id of "menu-btn"

5) Load in jQuery

6) Add a click-event to the button and on this event, toogle the class "active" for the menu

7) In your CSS create a rule for the .on class. In this rule, place the menu where you want it to be.

8) (Optional) Add a CSS transform rule to animate the menu

Snippets

```
$("menu-btn").click(function() {

  $("#main-menu").toggleClass("on");

});
```
