Animate an element - Part 2

Run a CSS animation on an element by assigning it a CSS class.

1) Load in jQuery from either local or external source

2) Replace the body onload attribute with a jQuery document ready[1]

3) Replace the elements selectors to jQuery selectors

4) Replace the addEventListener to a jQuery .click() function

5) Replace the .className property call to jQuery toggleClass()

Snippets

```
click_btn = document.getElementById('action');
=>
$click_btn = $("#action");
```

```
click_btn.addEventListener('click', animate);
=>
$click_btn.click(function() {
  animate();
});
```

```
$box = $("#box");
$box.toggleClass("animated wobble");
```
